INTERNATIONAL PACIFIC HALIBUT COMMISSION

October 15, 1966

Field Research Plans for 1967

Field research activities tentatively planned by the International Pacific Halibut Commission for 1967 will require the charter of two commercial trawlers and one commercial set-line vessel. One trawler will continue the annual assessment of the distribution and abundance of young halibut in southeastern Bering Sea. The second trawler will continue the annual assessment of young halibut on inshore and offshore grounds in the Gulf of Alaska. The setline vessel will conduct research fishing and tagging along the Aleutian Chain.
