Cruise Plan of Russian Research Vessel “TINRO” Involving Incidental Takes of Anadromous Fish in the North Pacific Ocean in 2020

Keywords: Russian research vessel, Pacific mackerel, Japanese pilchard, trawl survey

ABSTRACT

One Russian research vessel is scheduled to conduct epipelagic trawl surveys in summer and fall 2020. R/V “TINRO” will carry out a summer monitoring survey in the Pacific waters off Kuril Islands in August–September. The primary objectives are to collect biological information on plankton and nekton communities, and describe the physical and biological oceanographic conditions in this regions. The major purpose of these studies is the estimation of Pacific mackerel, Japanese pilchard, mature and immature Pacific salmon and other nekton species abundance and biomass.

LOCATIONS AND PERIOD OF SURVEY

The cruise of research vessel R/V “TINRO” is planned to conduct its survey in the Okhotsk Sea, Pacific waters of Kuril Islands and out off Russian EEZ for estimation of Pacific mackerel, Japanese pilchard, mature and immature Pacific salmon and other nekton species abundance and biomass in August 20–September 02, 2020 (Fig. 1).
